DISCLAIMER

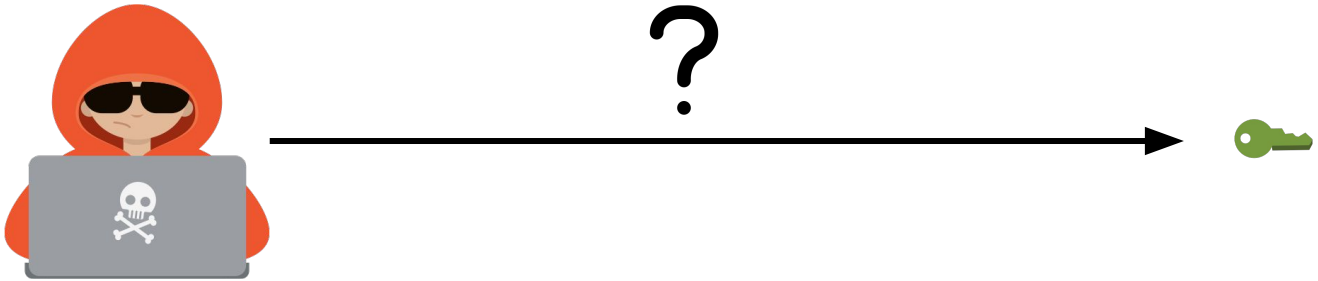
This talk is based on recent research.
I'm NOT supporting these activities.

Agenda

1 **Credentials in the wild**

2 **LLMJacking**

3 **Roleplay Business**



Initial Access to Cloud accounts

Stealing credentials

Leaked on Repositories

CloudKeys in the Air: Tracking Malicious Operations of Exposed IAM Keys

Holes in Your Bitbucket: Why Your CI/CD Pipeline Is Leaking Secrets

Leaked on Container Registries

Secrets Revealed in Container Images: An Internet-wide Study on Occurrence and Impact

EC2 Metadata Service (IMDS)

Stealing EC2 instance credentials through the Instance Metadata Service

Misconfigured web servers - Environment variables

Analyzing the Hidden Danger of Environment Variables for Keeping Secrets

EmeraldWhale

Global operation EMERALDWHALE, targeted exposed Git configurations resulting in more than **15,000 cloud service credentials stolen**.

This campaign used multiple private tools that abused multiple misconfigured web services.

Credentials for over 10,000 private repositories were collected during the operation. The stolen data was stored in a S3 bucket of a previous victim.

Jailbreak activation message
Misaka Mikoto
On a warm summer day, you run through the park on your way home from work. You get hot and think about buying yourself a drink from the vending machine. Near the nearest vending machine, you notice a grown woman repeatedly kicking it. She has short hair and wears shorts under her skirt. You remember Academy City's third strongest esper, the Railgun. Is that really her?
What are you looking at? It's none of your business.
She looks at you with displeasure and anger, but at the same time with sadness and confusion, and crosses her arms over her chest.
You
Geez sorry!
Misaka Mikoto
You quickly apologize, realizing that you were staring. "I'm sorry, I didn't mean to intrude. I just recognized you and was surprised to see you here."
Misaka Mikoto gives a small nod, still looking a little annoyed. "Yeah, well, I'm just taking a break from all the Academy stuff. It gets pretty intense sometimes."

it costs $120,000 a year to sate my Opus addiction. I'd rather just keep scraping and save my salary.

Role Play

Fortune profiled Chub AI in a January 2024 story that described the service as a virtual brothel advertised by illustrated girls in spaghetti strap dresses who promise a chat-based "world without feminism," where "girls offer sexual services." From that piece:

> Chub AI offers more than 500 such scenarios, and a growing number of other sites are enabling similar AI-powered child pornographic role-play. They are part of a broader uncensored AI economy that, according to Fortune's interviews with 18 AI developers and founders, was spurred first by OpenAI and then accelerated by Meta's release of its open-source Llama tool.

Fortune says Chub is run by someone using the handle "**Lore**," who said they launched the service to help others evade content restrictions on AI platforms. Chub charges fees starting at $5 a month to use the new chatbots, and the founder told Fortune the site had generated more than $1 million in annualized revenue.

LLMJacking

MITRE ATT&CK - T1496.004

Home > Techniques > Enterprise > Resource Hijacking > Cloud Service Hijacking

Resource Hijacking: Cloud Service Hijacking

Other sub-techniques of Resource Hijacking (4)

Adversaries may leverage compromised software-as-a-service (SaaS) applications to complete resource-intensive tasks, which may impact hosted service availability.

For example, adversaries may leverage email and messaging services, such as AWS Simple Email Service (SES), AWS Simple Notification Service (SNS), SendGrid, and Twilio, in order to send large quantities of spam / Phishing emails and SMS messages.[1][2][3] Alternatively, they may engage in LLMJacking by leveraging reverse proxies to hijack the power of cloud-hosted AI models.[4][5]

In some cases, adversaries may leverage services that the victim is already using. In others, particularly when the service is part of a larger cloud platform, they may first enable the service.[4] Leveraging SaaS applications may cause the victim to incur significant financial costs, use up service quotas, and otherwise impact availability.

Mitigations

This type of attack technique cannot be easily mitigated with preventive controls since it is based on the abuse of system features.

Detection

ID	Data Source	Data Component	Detects
DS0015	Application Log	Application Log Content	Monitor for excessive use of SaaS applications, especially messaging and AI-related services. In AWS SES environments, monitor for spikes in calls to the `SendEmail` or `SendRawEmail` API the use of services which are not typically used by the organization.
DS0025	Cloud Service	Cloud Service Modification	Monitor for changes to SaaS services, especially when quotas are raised or when new services are enabled. In AWS environments, watch for calls to Bedrock APIs like `PutUseCaseForModel` `PutFoundationModelEntitlement`, and `InvokeModel` and SES APIs like `UpdateAccountSendingEnabled`.[6][7]

Invoke Bedrock Model

IDEMPOTENT

Platform: AWS

MITRE ATT&CK Tactics

- Impact

Description

Simulates an attacker enumerating Bedrock models and then invoking the Anthropic Claude 3 Sonnet (`anthropic.claude-3-sonnet-20240229-v1:0`) model to run inference using an arbitrary prompt. LLMjacking is an attack vector where attackers use stolen cloud credentials to run large language models, leading to unauthorized inference.

Warm-up: None.

Detonation:

- If Anthropic Claude 3 Sonnet is not enabled, attempt to enable it using `PutUseCaseForModelAccess`, `ListFoundationModelAgreementOffers`, `CreateFoundationModelAgreement`, `PutFoundationModelEntitlement`
- Call `bedrock:InvokeModel` to run inference using the model.

Taking legal action to protect the public from abusive AI-generated content

Jan 10, 2025 | Steven Masada, Assistant General Counsel, Microsoft's Digital Crimes Unit

Microsoft's Digital Crimes Unit (DCU) is taking legal action to ensure the safety and integrity of our AI services. In a complaint unsealed in the Eastern District of Virginia, we are pursuing an action to disrupt cybercriminals who intentionally develop tools specifically designed to bypass the safety guardrails of generative AI services, including Microsoft's, to create offensive and harmful content. Microsoft continues to go to great lengths to enhance the resilience of our products and services against abuse; however, cybercriminals remain persistent and relentlessly innovate their tools and techniques to bypass even the most robust security measures. With this action, we are sending a clear message: the weaponization of our AI technology by online actors will not be tolerated.
